Hail check: windows and doors

About 10 minutes. You need a coin, your phone and daylight. Start on the side the storm came from. At each window and door, look at the same six things in the same order. Early or late light shows dents best; stand to one side and look along the surface.

Storm date: _____ Claim number (if filed): _____

Six looks per opening

1. ☐ Capping and trim: dents or chips in the aluminum or vinyl around the frame. Hold a coin beside each one.
2. ☐ Screens: tears, holes or dents in the screen cloth or the screen frame.
3. ☐ Glass: chips, star cracks or a crack running from a corner.
4. ☐ Sash corners: cracks at the welded corners of vinyl sashes and frames.
5. ☐ Patio doors and storm doors: dents in the frame and the wide flat faces. Look along them in side light.
6. ☐ Nearby: dents in downspouts, gutters, AC fins and the mailbox on the same side.

Three photos per opening with a mark

1. The whole window or door, so anyone can tell which one it is.
2. A close-up of the mark with a coin held beside it for scale.
3. The same spot from an angle in side light, so a dent shows as a shadow.

Your policy and adjuster decide coverage. We are a contractor, not a public adjuster. We inspect, document each opening, write an itemized estimate and can be there when the adjuster visits.

Two ways to a quote: text the photos and this list to 763-250-3621 or send them from jmbbuildersmn.com and we reply within one business day. Or book a free in-home estimate and we walk every opening inside and out.
